BioBalance

Let radiation no longer get you out of balance

ALWAYS AND UBIQUITOUS

Radiation is everywhere

Electricity has completely changed the way we live and work. It has permeated every area of our lives. Today, we are engulfed in Wi-Fi, Bluetooth, microwaves, radio waves, dirty electricity and other frequencies that congest the airwaves, causing what is known as '*electrosmog*'.

The level of exposure to electrosmog that is harmful remains highly debated. However, numerous studies have provided sufficient data to support the conclusion that electrosmog *does* have an effect on our lives and health.

Possible negative health effects

One effect of Electromog is that it reduces the production of *Melatonin*, a hormone that tells our body when it's time to sleep. It may be no surprise to learn that in recent decades, the number of people with sleep disorders has risen tremendously!

However, it is also assumed that radiation is the basis for life threatening diseases, depression, nervousness, fatigue and other sleep related disorders.

Knowing how the human body functions, will help us to better understand - and deal with - the effects of electromog.

SHORT TERM EFFECTS

- Anxiety
- Depression
- Stress/Fatigue
- Sleep disorder
- Insomnia
- Nervousness
- Concentration problems
- Muscular fitness

LONG TERM EFFECTS

- Sexual disorder
- Skin disorders
- Chronic fatigue
- Digestive disorders
- Food intolerances
- Life-threatening diseases

ALWAYS UNDER CURRENT

The body as a bioelectric system

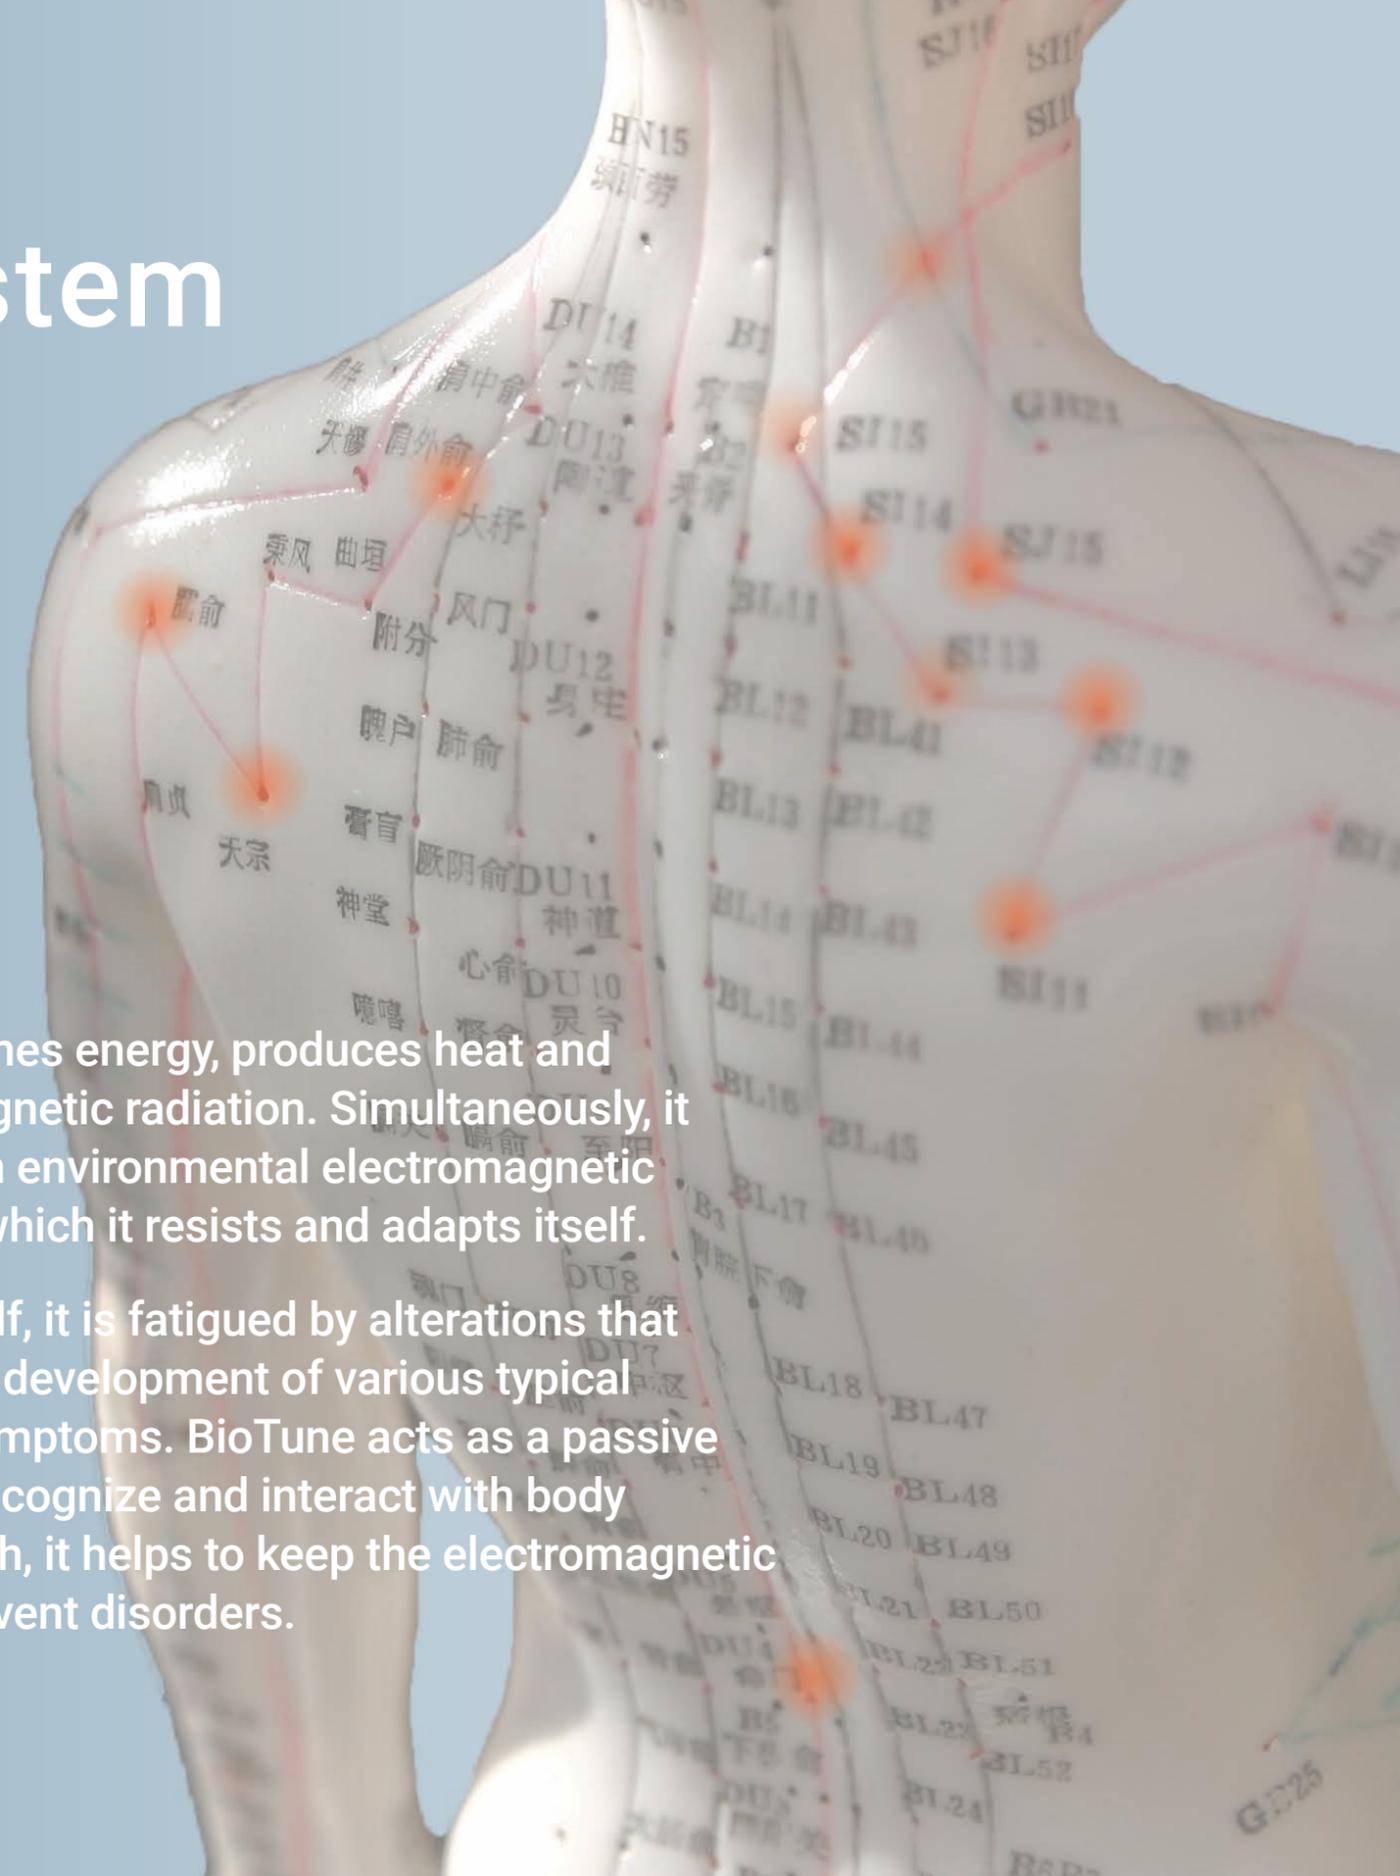

Our body's nervous system and organs works with organized bio-electronical mechanisms. A communication network between the trillions of cells.

This is why we can conclude that electrical disturbance is the first phase of a disease: it can cause incorrect passing of information and hinders the good communication between our cells. As such, it forms the very basis of disorder itself.

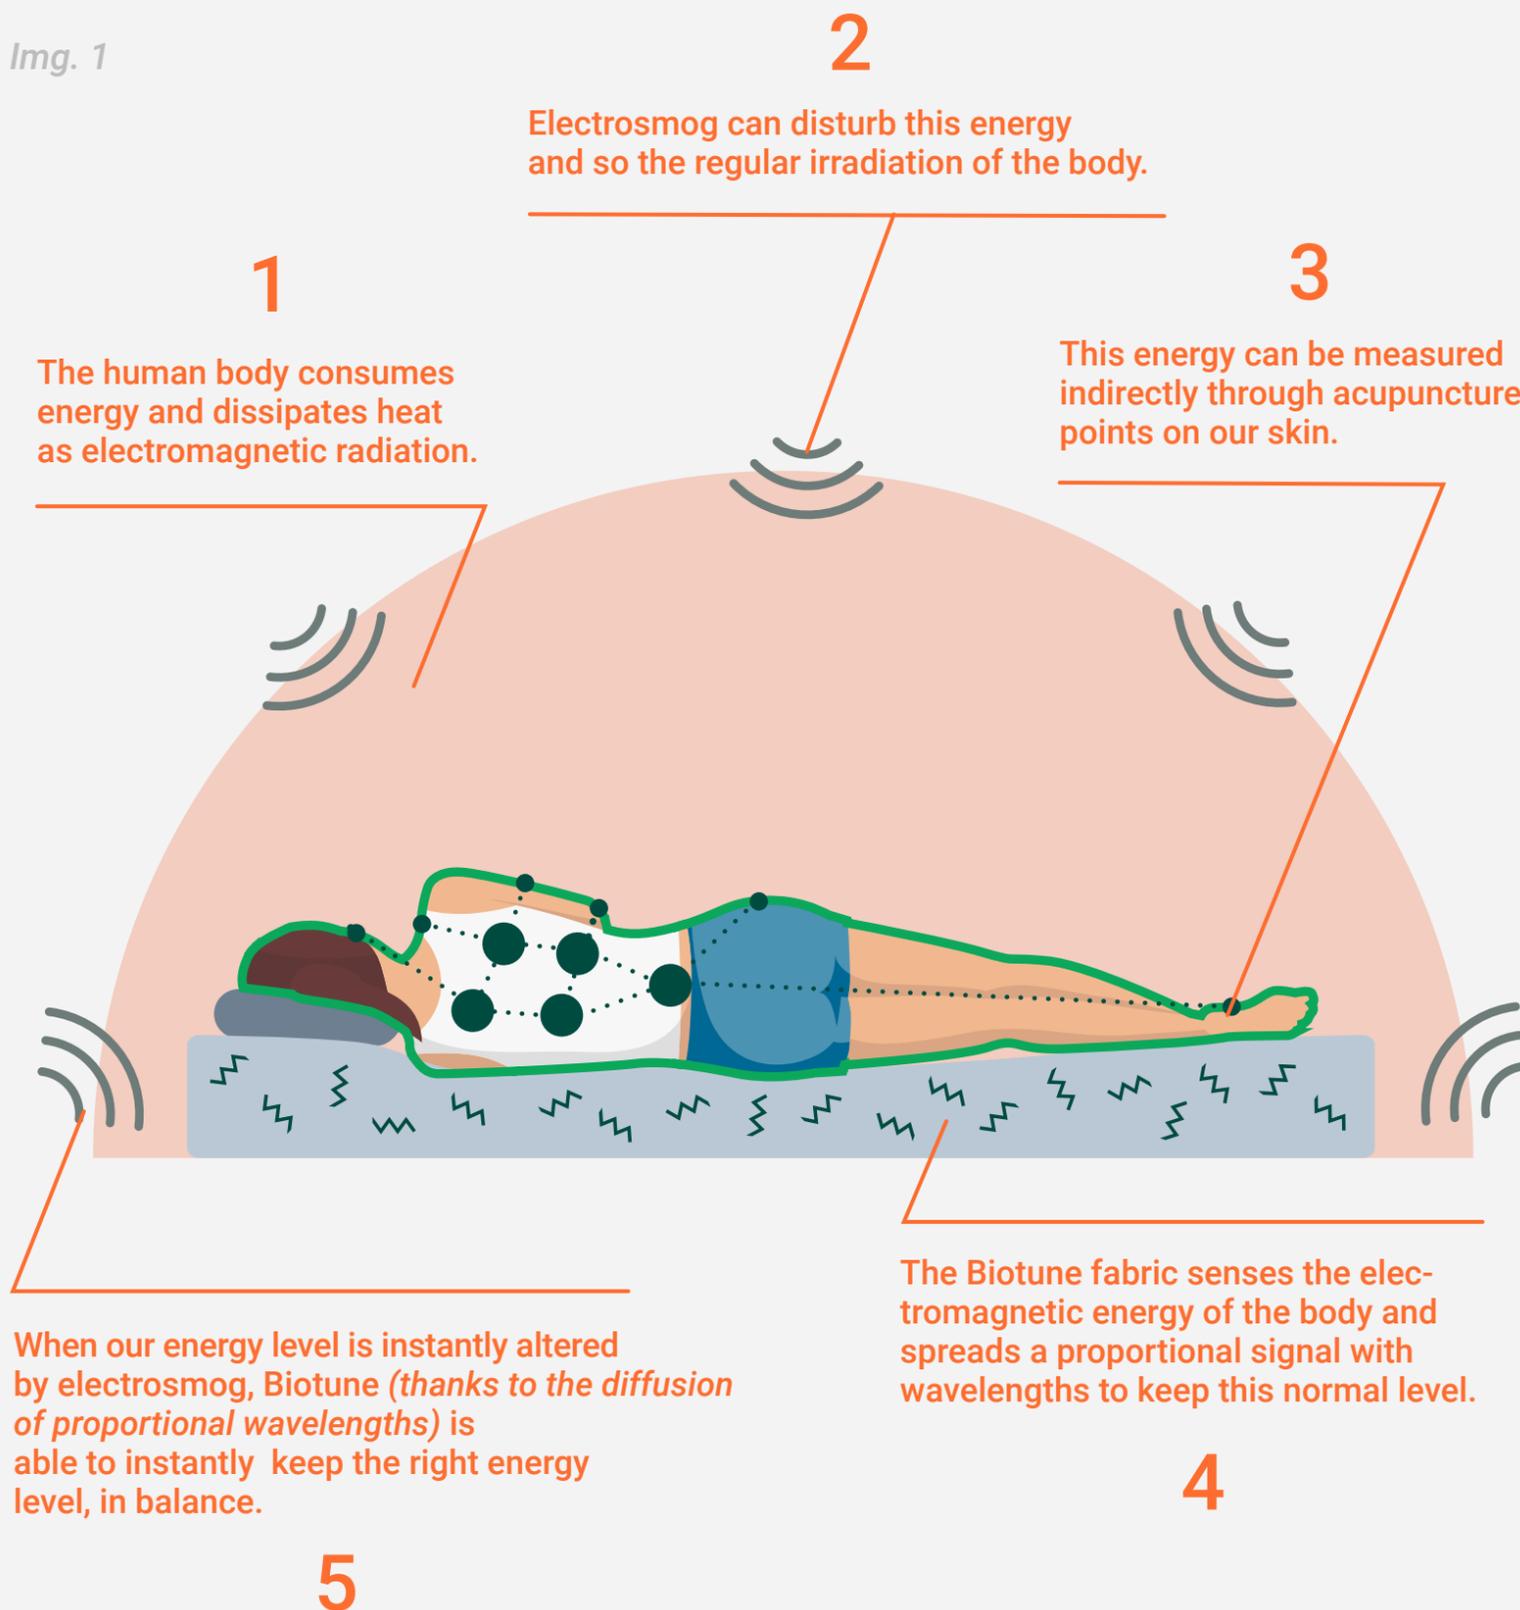

Our skin plays a crucial role here, because it serves as a touch screen through which bio-electrical signals are transmitted from the outside to the inside and vice versa. This principle relates to the acupuncture: every point of the skin is related to a body function, body tissue or a part of an internal organ.

Our body consumes energy, produces heat and emits electromagnetic radiation. Simultaneously, it also suffers from environmental electromagnetic interference, to which it resists and adapts itself.

In defending itself, it is fatigued by alterations that contribute to the development of various typical disorders and symptoms. BioTune acts as a passive sensor, able to recognize and interact with body radiation. As such, it helps to keep the electromagnetic balance and prevent disorders.

BIOTUNE GETS YOU BACK IN BALANCE

How it works

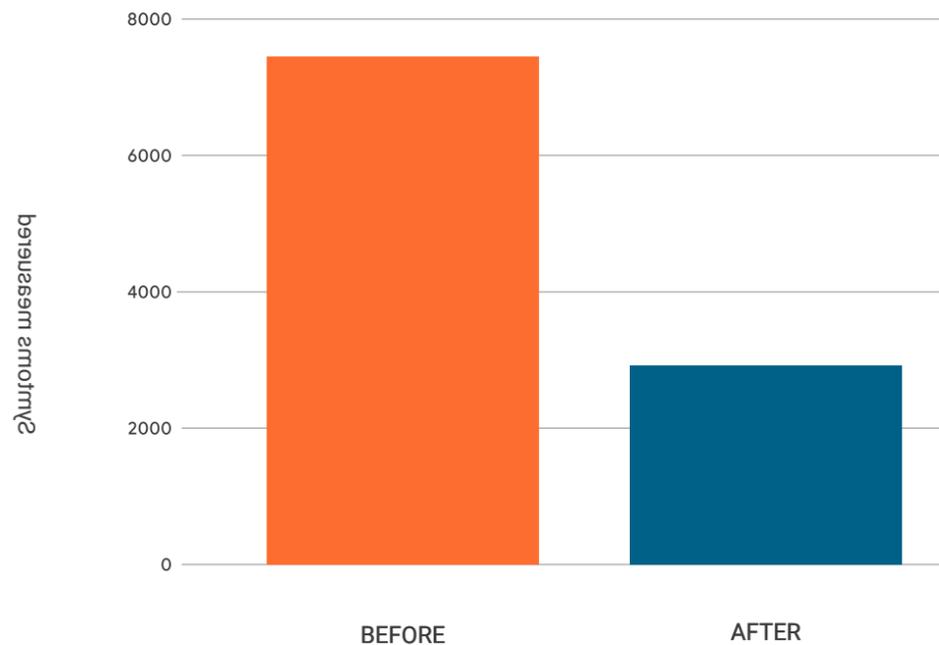

Intensive research led to the development of Biotune, a revolutionary fabric that reinforces our resistance to electromagnetic pollution.

Biotune is a fabric based on BioSynt* technology. This technology allows the storing of information in the crystalline structure of conductive materials such as yarns. In case of exposure to electromagnetic fields, Biotune regulates and synchronizes the tuning of the electromagnetic activity of the body and so creates the conditions for the maintenance of normal communication between the body's cells. In the illustration on the left, we clarify the working principle.

REGAIN YOUR BALANCE WHILE YOU SLEEP

Tested and approved

Img. 2 – Comparison test measuring the total number of Electrosmog effects before and after using BioSynt.

Biotune mattress fabric helps to neutralize the effects of radiation. In specific tests, conducted on the quality of sleep after only one week of use, the trend found was:

- **A considerable reduction in WASO (interruption of the sleep)**
- **Increased sleep efficiency**

The graph (Img. 2) shows the result of a comparison test that was performed on a group of 300 volunteers. After a trial period of 3 weeks, the test showed a significant reduction in perceived electrosmog symptoms of over 60%.

The benefits in a nutshell

- ✓ Avoid chronic fatigue and easy tiring
- ✓ Better concentration
- ✓ More restful sleep
- ✓ Falling asleep more quickly
- ✓ Improved digestion
- ✓ Feeling more relaxed
- ✓ Less visual fatigue
- ✓ Fewer migraine
- ✓ Less irritability
