SANITIZED® TREATMENTS:

Hygiene function for textiles

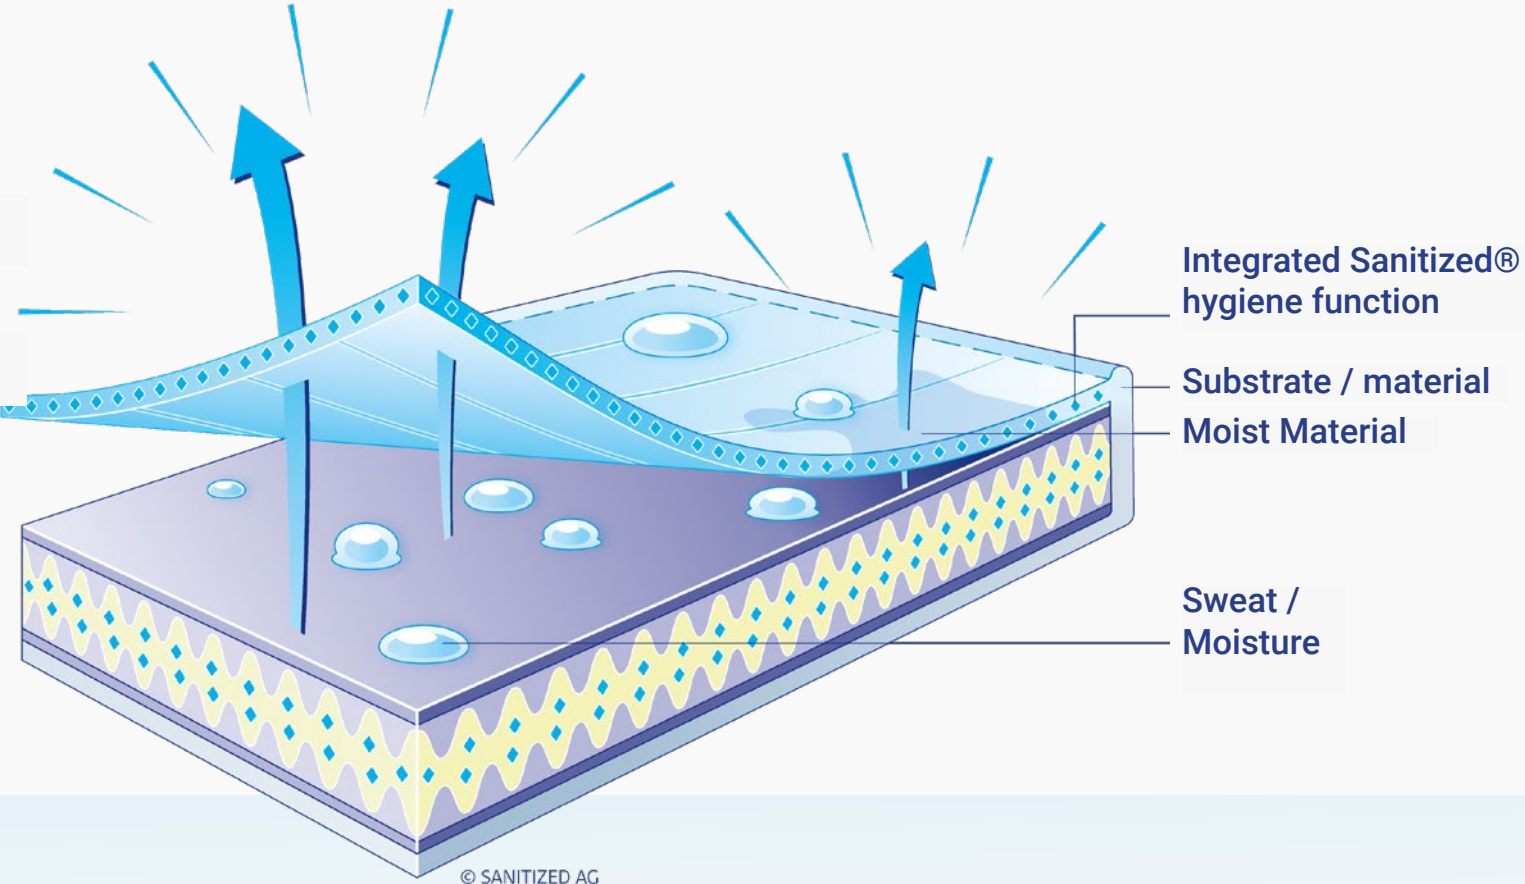

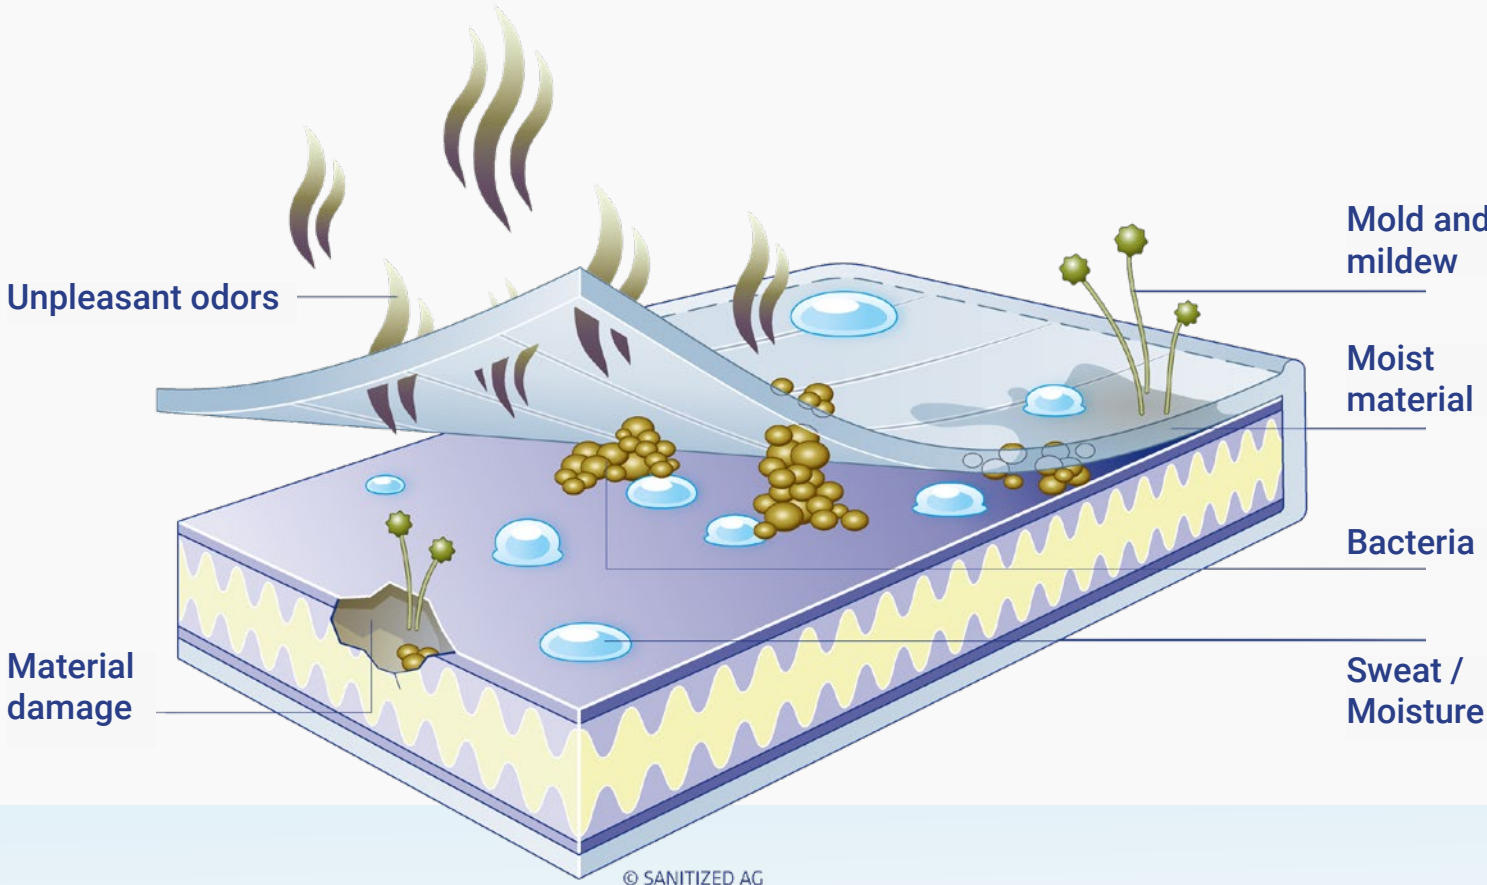

Especially after the pandemic, there has been a consistently growing demand for effective and **long-lasting hygiene functions** from the market and from consumers. We may not realise it directly, but we can be affected by bacteria and viruses in our own bed! Bacteria and microorganisms are side to side with us: they prefer the same climatic conditions respective humidity and temperature, plus they continue reproducing undisturbed where there is an abundance of suitable nourishment, a.k.a. our skin flakes and sweat.

Thanks to the integrated Sanitized® antimicrobial hygiene function, home textiles made from STELLINI receive comfort and peace of mind: it makes them last longer and require less washings.

Comfort at home

Textile surfaces in contact with the human body can easily be a place of proliferation for bacteria and microorganisms, creating unpleasant odors that permanently adhere to the fabrics. Fabrics treated with the integrated Sanitized® function for long-lasting freshness: bad odors will only be a distant memory!

The treatment advantage on the fabrics

- ✓ Can be combined with other textile finishes
- ✓ Keeps textiles fresh
- ✓ Prevents microbial development such as fungi and microorganisms
- ✓ No influence on thermo-migration

Tested. Approved.

Fabrics treated with Sanitized® hygiene function are all tested and qualified OekoTex Standard 100 by STELLINI.
